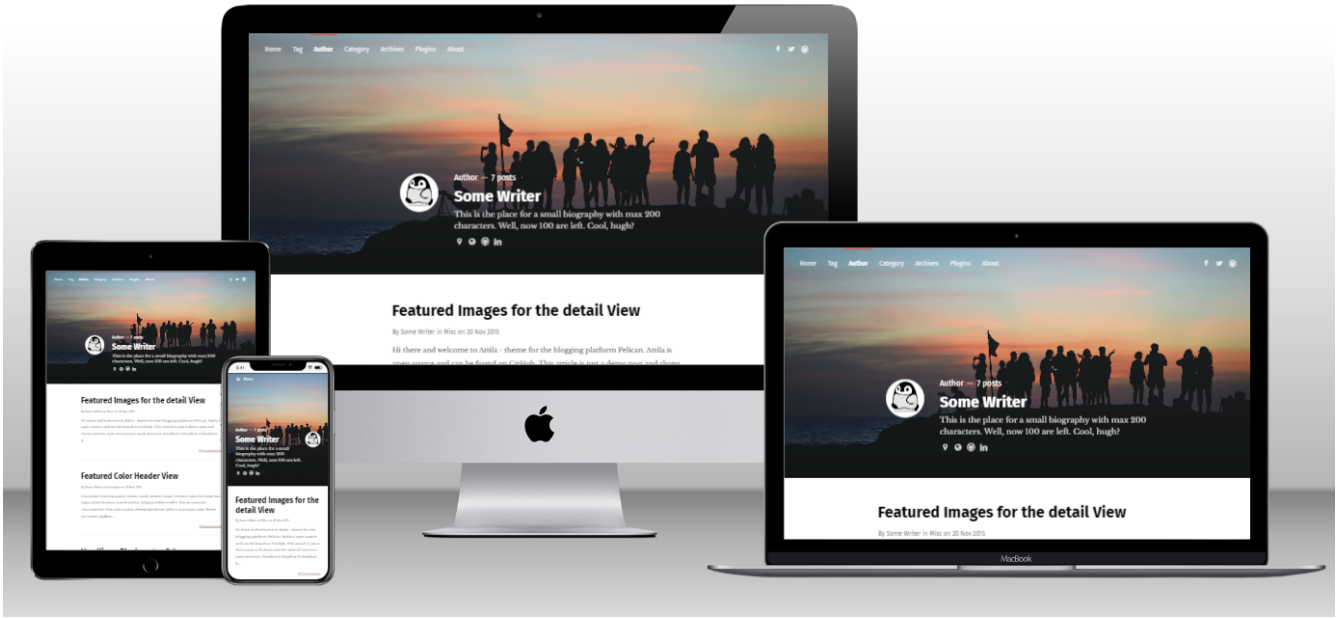
Attila



Overview

A content focused responsive theme for Pelican.

It is ported from ghost theme attila

Demo

- Blog
- Post
- Tag Archive
- Author Archive
- All archive
- Page

Demo blog source code

Install

Using Pip

```
pip install git+https://github.com/arulrajnet/attila.git@master
```

Then in your `pelicanconf.py` set the theme to `attila`.

```
import attila

THEME = attila.get_path()
```

Using pelican-themes

The recommend way to install is using pelican-themes command.

- Download latest zip from release
- Unzip that file
- Then `sudo pelican-themes -U attila`. Here attila is the extracted folder name
- Now list all themes `sudo pelican-themes -l`
- Use that theme name in your pelicanconf.py

Features

- Responsive layout
- Navigation support
- Paralax cover images for posts, author archives and blog
- Author informations for posts and author archives
- Featured posts (via plugin)
- Reading progress for posts
- Automatic code syntax highlight
- Disqus support
- Google Analytics, GAUGES and PIWIKI
- Sharing buttons
- Open Graph
- Rich Snippets (JSON-LD)

Configurations

The attila docs hosted in attila-docs

Setup a blog

Refer more setting

Here are all configurations about this theme.

Header Covers

You can set cover images for your blog, article, page, tag, category and author. The cover images can be from your relative path or from internet.

Blog Cover

The is the cover image for your site main index.html.

To set blog cover, set the property `HOME_COVER` in `pelicanconf.py`:

```
HOME_COVER = '/assets/images/blog_cover.png'
```

NOTE	HEADER_COVER property is deprecated. Work around will be use HOME_COVER and use cover in individual articles. This property will be used if there is no cover image set to an article, page, tag, category, author.

Article Cover

To set different cover image for an article set `cover` metadata in front-matter.

```
:title: With Cover Images
:date: 2018-04-29 00:45
:author: arul
:category: foo
:tags: footag
:slug: with-cover-images
:cover: /assets/images/article_cover.jpg
```

For more refer article .

Page Cover

To set different cover image for a page set `cover` metadata in front-matter.

```
:title: Page With Cover Images
:date: 2018-04-29 00:45
:author: arul
:category: foo
:tags: footag
:slug: page-with-cover-images
:cover: assets/images/page_cover.jpg
```

For more refer article .

Tag Cover

To set cover image for a tag, set the property `TAG_META` in `pelicanconf.py`:

```
TAG_META = {
  'food': {
    'cover': '/images/food.png',
    'description': 'Examples ipsum dolor sit amet. Topping'
  },
  'drinks': {
    'cover': '/images/orange-juice.png',
    'description': 'Examples ipsum dolor sit amet. Juice'
  }
}
```

Category Cover

To set cover image for a category, set the property `CATEGORY_META` in `pelicanconf.py`:

```
CATEGORY_META = {
  'food': {
    'cover': '/images/junkie-stuff.png',
    'description': 'Examples ipsum dolor sit amet. Topping'
  }
}
```

Author Cover

To set cover image for an author, set the property `AUTHOR_META` in `pelicanconf.py`:

```
AUTHOR_META = {
  "zutrinken": {
    "cover": "/assets/images/zutrinken-cover.png"
  }
}
```

For more refer author .

Header Color

To define a simple header background color, set the property `HOME_COLOR` in `pelicanconf.py`:

```
HOME_COLOR = 'black'
```

you can use any valid css color. This will be used if there is no cover image set in article level and

site level.

NOTE	HEADER_COLOR property is deprecated. Work around will be use HOME_COLOR and use color in individual articles. This property will be used if there is no HEADER_COVER and cover image set to an article, page, tag, category, author.

Social URLs

Github, Twitter and Facebook URLs set these properties:

```
SOCIAL = (('twitter', 'https://twitter.com/myprofile'),
          ('github', 'https://github.com/myprofile'),
          ('facebook','https://facebook.com/myprofile'),
          ('flickr','https://www.flickr.com/myprofile/'),
          ('envelope','mailto:my@mail.address'))
```

External feed URL

You can specify an external feed URL (e.g. FeedBurner) in `SOCIAL` using the `rss` or `rss-square` or `feed` icons. A `<link>` tag for the external feed will be placed in `<head>` instead of the default Pelican feeds.

User defined CSS

Define `CSS_OVERRIDE` in `pelicanconf.py` to insert a user defined CSS file after theme CSS. Example:

Array of CSS you can give

```
CSS_OVERRIDE = ['css/myblog.css']
```

User defined script

```
JS_OVERRIDE = ['']
```

Author Bio

```
AUTHOR_META = {
  "zutrinken": {
    "name": "Zutrinken",
    "cover": "https://attila.demo.arulraj.net/assets/images/avatar.png",
    "image": "https://attila.demo.arulraj.net/assets/images/avatar.png",
    "website": "http://blog.arulraj.net",
    "location": "Chennai",
    "bio": "This is the place for a small biography with max 200 characters. Well, now
```

```
100 are left. Cool, hugh?"
  }
}
```

The supported social profile for author are `facebook`, `github`, `linkedin`, `twitter` and `instagram`.

Analytics

Accept many analytics:

- Google Analytics: `GOOGLE_ANALYTICS`;
- Gauges: `GAUGES`
- Piwik: `PIWIK_URL` and `PIWIK_SITE_ID`.

Menu Items

The menu item coming from pelican config `MENUITEMS`.

For ex:

```
MENUITEMS = (('Home', '/'),
             ('Tag', '/tag/getting-started/'),
             ('Author', '/author/pelican/'),
             ('Category', '/category/examples/'),
             ('Archives','/2015/11/'),
             ('Plugins', 'https://github.com/pelican-plugins'))
```

Article Cover

- To customize header color to articles, insert the metadata `color`.
- To customize header cover to articles, insert the metadata `cover`, otherwise `og_image` or `HEADER_COVER` will be used.
- To customize OpenGraph images, insert the metadata `og_image`, otherwise `cover`, `HEADER_COVER` or a default image from theme will be used.
- To customize Twitter card images, insert the metadata `twitter_image`, otherwise `header_cover`, `HEADER_COVER` or a default image from theme will be used. Twitter cards will be generated automatically if the `twitter` account is configured in `SOCIAL`!

All image paths are relative from the site root directory. You can also use absolute URLs for `og_image` and `twitter_image`.

Tag Cloud

Attila renders tags page as a tag cloud.

Use `TAG_CLOUD_STEPS` configuration variable to specify number of font size steps for the tag cloud. Default value is 5, stylesheet is written to support up to 10 steps. If you want more steps, you'll need to configure your CSS manually (see `CSS_OVERRIDE`)

Other configuration

- Set `FACEBOOK_ADMINS` to a list of Facebook account IDs which are associated with this blog. For example `['12345']`. For more info see https://developers.facebook.com/docs/platforminsights/domains
- `GOOGLE_SITE_VERIFICATION` - Google site verification token.
- Set `SHOW_ARTICLE_MODIFIED_TIME` to `True` to show the article modified time along with created time. Default is `False`.
- Set `SHOW_AUTHOR_BIO_IN_ARTICLE` to `True` to show the bio of author in end of the each article. Default is `False`.
- Set `SHOW_CATEGORIES_ON_MENU` to `True` to show the categories as menu item at the top. Default is `False`.
- Set `SHOW_COMMENTS_COUNT_IN_ARTICLE_SUMMARY` to `True` to show the comments count in article summary. Default is `True`.
- Set `SHOW_CREDITS` to `True` to show the credits of the theme at the bottom. Default is `True`.
- Set `SHOW_FULL_ARTICLE_IN_SUMMARY` to True to show full article content on index.html instead of summary. Default is `False`.
- Set `SHOW_PAGES_ON_MENU` to `True` to show the each page as separate menu item. Default is `True`.
- Set `SHOW_SITESUBTITLE_IN_HTML_TITLE` to `True` to show the site description (Set using variable `SITESUBTITLE`) after site name. Default is `False`.
- Set `SHOW_TAGS_IN_ARTICLE_SUMMARY` to `True` to show the tags in article summary. Default is `False`.
